Problem Statement:

As a user we face many difficulties in our daily file. In our daily life money is the most important portion and without it we cannot last one day on earth but if we keep on track all financial data then we can overcome this problem. The main problem with most of the expense tracking applications is the advertisements. Current system only supports only one specific currency. The main learning outcome from this system which came in mind is to customize the options for currencies so that users from other countries will not suffer the same problem which they are suffering in the current system. Most of the expense manager applications didn't support multiple bank accounts. Due to the lack of a complete tracking system, there is a constant overload to rely on the daily entry of the expenditure and total estimation till the end of the month. The main objective of this project is support to the user to sustain all financial activities like digital automated dairy. This application helps the user to avoid unexpected expenses and bad financial situations.
